

THE PROBLEM

Healthcare adoption signals are **public** but **invisible**

GTM and strategy teams discover account readiness manually, late, or not at all
— long after a buying window has opened.

- 🌐 Signals are scattered across hospital websites, job boards, clinical trial registries, press releases, and conference proceedings
- 🕒 By the time readiness is obvious in CRM or static datasets, the window is already closing
- 🔍 No existing tool aggregates live public web signals into ranked, actionable account intelligence

Signal sources — all fragmented

Hospital websites Job postings ClinicalTrials.gov Press releases
Physician profiles Conference activity Regulatory filings
Market news

These signals appear **6–18 months** before formal buying intent — but only if you're watching.

THE SOLUTION

AccessFox turns live web signals into ranked account-readiness intelligence

Account Readiness Score

0–100 signal-weighted score per organization, updated at query time from live web evidence — not static databases.

Evidence Ledger

Each score is backed by a ledger of sourced signals: excerpts, dates, and clickable links to original sources.

Why Now · Recommended Action · Outreach Angle

AI reasoning converts evidence into commercial guidance — urgency, next step, and messaging tailored to each account.

BRIGHT DATA + ENTERPRISE IMPACT

Live web data as a competitive intelligence layer

Bright Data Layer

Bright Data SERP API is the live web infrastructure. Every query pulls real-time Google results through residential proxy infrastructure — bypassing bot detection, delivering current public signals that no static database can match.

AI Reasoning Layer

Parallel AI calls (AIML API) process URL batches simultaneously, identifying organizations, classifying signal types, and generating Account Readiness Scores, Evidence Ledgers, and commercial guidance.

Enterprise Output

GTM, partnerships, and strategy teams get ranked, evidence-backed account lists — not leads, but accounts with proven signals of adoption readiness and clear commercial entry points.
